“Full OS/Client configuration supported” refers to the period in which both the Office client version and the Windows version are in support (including extended support). See [here](#) for more details.

“Service use supported” refers to the period in which Office 365 cloud service use (e.g., Exchange Online, SharePoint) will be supported for a given configuration. See [here](#) and [here](#) for more details.

 Change announced July 1, 2019 ([announcement](#))

How to use this table (example): I am running Office 2016 on Windows Server 2016. How long will my full configuration be supported by Microsoft? From the header row, I find that Office 2016 will leave extended support in October 2025. From the leftmost column, I find that Windows Server 2016 will reach end of support in January 2027. Where that row and column intersect, I find that my full configuration (including services like Exchange Online) will be supported until October 2023, at which point I will no longer be able to use Office 365 services within this configuration (due to the [policy outlined here](#)). However, my Office 2016 client applications will continue to be supported on WS2016 until October 2025, when Office 2016 leaves extended support.

*Beyond January 2020, Office 365 clients running on Windows 7 and Windows Server 2008 / 2008 R2 (with or without ESU) will receive Office 365 security updates only, thru January 2023.
